**Lines of research:**
Conduction of a clinical trial (“Dementia-Friendly Hospital”) for the improvement of the quality of care in hospitalized elderly patients affected by dementia.
The main purpose of the trial is:
The assessment, through a pilot study (first trial in Italy), of the effect of the implementation of Dementia-Friendly practices within various Hospital Divisions (Internal Medicine, Cardiology, Surgery). Briefly, patient’s parameters are measured before and after a training period of the hospital staff on dementia, with the collaboration of the Neuropsychological Center – Alzheimer Section of Vigevano (PV). The effect of the cognitive and functional status on clinical parameters and drug use is studied. This investigation has been approved by the Ethical Committee and it is on going.
